QUESTION 1

A developer is working on a fork to address a user experience issue and needs to push a new branch named 'dev' to the remote repository named 'devPRO'. The local branch needs to be updated with any new changes that were pushed to the remote repository from other contributors. Which Git command must be used?

A. git reset -f

B. git merge --all

C. git pull --all

D. git fetch -f

Correct Answer: C

QUESTION 2

A developer is developing a web application that uses username and password to authenticate to the next service. The user credentials must be available at any time in the application. The developer must choose and implement a secure method of storing the authentication credentials that are used in the automation code.

Which password handling method must be used to minimize the security risk?

kernel-memory flag.

Correct Answer: D

QUESTION 6

What are two use cases where webhooks are effective? (Choose two.)

A. Close a session with a web server after a specific amount of time.

B. Change the response format or content type of an API call.

C. Inform a previously defined chat channel after a deployment fails.

D. Send an email to a customer of an online store after payment is complete.

E. Filter out information from a response to an API call.

Correct Answer: CD

QUESTION 7

What is a benefit of organizing code into modules?

A. enables the inclusion of more programming languages in the code

B. makes it easier to deal with large and complex systems

C. improves collaboration of the development team

D. enables the code to be broken down into layers

Correct Answer: B

QUESTION 8

A developer created a new secure API and is testing the functionality locally. The API was added to a container for further testing, and other team members and applications need to connect to the API. Which command exposes the API in the container as port 8443 and allows connections external to the host?

A. docker run -p 0.0.0.0:8443:443/tcp myapiservice

B. docker run -p 127.0.0.1:443:8443/tcp myapiservice

C. docker run -p 127.0.0.1:80:8443/tcp myapiservice

D. docker run -p 0.0.0.0:443:8443/tcp myapiservice

Correct Answer: A

QUESTION 9

What does a load balancer distribute in a network environment?

A. outgoing connections to the network

B. incoming traffic across multiple servers

C. traffic in the network by leveraging the switch architecture

D. different TCP connections to the routers

Correct Answer: B

QUESTION 10

Which OWASP threat occurs when untrusted data is supplied as input to an interpreter as part of a command or query?

A. cross-site scripting

B. broken authentication

C. data exposure

D. injection

Correct Answer: D
